jim@jralexander.com

I'm a front-end developer focused on web app architecture and creative coding. I strive to create pixel perfect UI with performant animations providing the highest quality user experience possible.

I have a strong understanding of Javascript beyond using libraries and frameworks, making use of object-oriented and functional programming paradigms. Currently I am building web apps in React and Redux using unit testing for clean, maintainable code. I am constantly exploring new frameworks and enjoy sharing my experiences with others on front-end standards and best practices.

BFA New Media Design RIT
2004 - 2008
