

Jim Alexander

Front-End Developer

Brooklyn, NY
720.218.1536
jim@jralexander.com

I am a front-end developer focused on web app architecture, high quality UI, and performant animation. I have a strong understanding of Javascript beyond libraries and frameworks, currently concentrating on React and Redux with optimized render performance. I am comfortable making back-end updates to APIs and databases, and strive to write maintainable code with full test coverage.
